

Kenyon's Results from the HEDS Sexual Assault Campus Climate Survey

The HEDS Sexual Assault Campus Climate Survey was deployed to all Kenyon students from January 18 to February 8, 2017. Of the 1,791 students invited to participate, 550 students completed the survey for a 31% response rate. Though the survey was completed by more than twice as many women than men (70% women, 28% men, 2% identified as neither a man nor woman) each cohort was well represented in the responses (First-years = 30%, Sophomores =25%, Juniors=23%, Seniors=22%). More than 81 other colleges participated in the HEDS Sexual Assault Campus Climate Survey in 2015-16 or 2016-17 school years.

The results of the HEDS Sexual Assault Campus Climate survey pose a challenge in that they are more personal than the results of almost all other Kenyon surveys. Our goal in this reporting is to balance transparency and privacy so that data can inform policy and education while carefully protecting individual respondents. Due to the extremely sensitive nature of this survey, data needed to meet the following criteria to be published:

- 1) Representative of 6 or more students. Some cases required combining categories to meet the minimum while other cases did not allow for reporting at all. If no students fell into a category, zeros are reported. Data that did not meet the 6 student threshold is indicated with a double dash (--).
- 2) Indicative of overall trends on campus rather than specific characteristics of an assault.
- 3) Not biasing or limiting the overall context of the data by privileging one narrative over another (e.g. the experiences of women over men).
